

The DPDI now has a switchable 20 dB pad!

Quality direct boxes are often very expensive and economy versions are extremely fragile and do not produce great sound. Digiflex® has found the perfect solution for a quality product at a reasonable price. The DPDI is designed and engineered in Canada and has the ruggedness and sound quality that rivals the more expensive products on the market.

A high quality custom transformer ensures sonic transparency and can handle input levels up to 25 dBu. Recessed connectors and ground lift switch, in a rugged metal housing, ensure the DPDI will last for years.

SPECIFICATIONS

Frequency Response	From 10 Hz to 40 kHz (± 3 dB)
THD at 60 Hz:	0.0114%
THD at 1 kHz:	0.0017%
Maximum Input:	+25 dBu at 60 Hz (1% THD)
